- Grade 1 out of 4 dental disease
- Otherwise, apparently healthy

Recommendations:

Date/Time Plan

01-16-2024 **Notes:**

Plan:

Diagnostics Offered:

- Bloodwork

Diagnostics Performed:

- Young Wellness Profile with Electrolytes

Treatments Performed:

- Rabies vaccine 3 yr **Right hind**

- DA2LPPV 3 yr **Right front**

- Bordetella Intranasal

Medications Prescribed:

- None

Discussions / Client Education:

- Discussed running 4DX: **Owner declined**

- Discussed vaccines administered:

Rabies vaccine 3 yr, DA2LPPV 3 yr, Bordetella Intranasal

- Advised on possible vaccine reactions/side effects and what to expect. For example rashes, facial swelling, local pain/sensitivity, itching, nausea/vomiting, and drowsiness. If you appreciate any facial swelling or difficulty breathing please be sure to contact Catskill Veterinary Services or a nearby emergency veterinarian. If any of the other side effects occur for more than 24 hours please contact us for further evaluation.

- Explained to owner **Bordetella** is a risk-based vaccine; as long as the patient is not boarding and will not be exposed to high-population dog areas such as dog parks, groomers, and boarding facilities there is no need to give the vaccine

- Addressed how to maintain the patient's oral health, including cleaning teeth and eating crunchy foods to reduce plaque buildup. Can brush patient's teeth if the patient would allow it, can do finger brushing or mechanical active brushing for cleaning teeth but do not use human toothpaste

- Recommended running bloodwork to make sure the patient is healthy as well as their systemic functions are working normally - **Owner agreed**

- Will call once bloodwork result is available; expect a call within a week

- Recommended frequent nail trimming for Tina

- Long nails could caught on things which could result in injury to the foot

- Call if there are any problems or concerns

Please monitor for lethargy, vomiting, diarrhea, increased respiratory rate or effort, or any other symptoms you are concerned with. If this occurs, please call us.

Thank you for giving us the opportunity to help in the care of Tina.
